

TopBraid Suite 6.3.2

TopBraid EDG

- Bug fix: TBS-2777: Expanding the Taxonomy Tree panel was really slow if a concept had many direct children.
- Bug fix: TBS-2778: Preview and Mutation dialogs were sometimes freezing up if thousands of violations were reported. Capped to 500 now.
- Bug fix: TBS-2731: Resolved issue with search query builder incorrectly identifying Literal datatype for equals query.
- Bug fix: TBS-2773: Allow taxonomies to have multiple root types in search viewpoint selector.
- Bug fix: TBS-2756: Use preemptive basic auth for remote SPARQL endpoint SERVICE queries.
- Bug fix: TBS-2806: Fixes an issue with AJAX race conditions in the Search Panel.
- Bug fix: TBS-2795: SHACL-defined tag properties would sometimes not show during tag set creation.
- Bug fix: TBS-2795: Select Tag Properties on Manage tab showed different properties from tag set creation.
- Bug fix: TBS-2814: Fixes display label for tagging properties defined by SHACL.
- Bug fix: TBS-2824: Fixes issue in Content Tag Set that was preventing imported resources in the subject graph from being tagged.
- Bug fix: TBS-2828: Fix GraphQL errors in tag set editor when Document Content panel is active for a non-Corpus tag set.
- Bug fix: TBS-2817: Fixes an issue with RDF imports into Collections whose names contain special characters.
- Bug fix: TBS-2845: Fixes compatibility problem with data platform when upgrading from version 6.2.
- Change: TBS-2788: Allow crosswalk mapping function to be overridden.
- Change: TBS-2795: Bring back the ability to specify additional tag properties at tag set creation time.

SHACL and GraphQL

- Bug fix: TSM-1411: sh:xone was sometimes validated incorrectly.
- Change: TBS-2777: If 'first' is specified then the engine will only visit up to first items, even if orderBy is set. Set orderAll:true to make sure that all items are visited.
