

TopBraid EDG

- Feature: TBS-4237: Defines Localized String Viewer a dash:viewer that will render localized values in a tree categorized by language. The tree root is determined by system configuration or browser language settings.
- Change: TBS-4237: Search results will now render the best language value determined by system configuration or browser settings for language fields. An information button is made available to view all values in a tree categorized by language.
- Change: TBS-4398: EDG Diagram, PropertyShapeNodes now use the sh:name for the header rather than the localname of the URI.
- Bug Fix: TBS-4410: Fixed sorting and filtering on subject area column on Asset Collections page.
- Bug Fix: TBS-4413: EDG Diagram, edge labels were resolving to URI's instead of the human readable label.
- Bug Fix: TBS-4414: EDG Diagram, edge labels weren't consistently resolving the same label.
- Bug Fix: TBS-4430: Update log4j to version 2.17.1 to fix vulnerability CVE-2021-44832.
- Bug Fix: TBS-4441: Fix null pointer exception that can occur when running Backup / Restore.
- Bug Fix: TBS-4443: Batch Edit was not correctly handling super class identification.
- Bug Fix: TBS-4448: Fix IllegalStateException that occurs during startup when EDG is configured to use DataPlatform.
- Bug Fix: TSM-2766: Problems and Suggestions panel, if used in Skip System Shapes mode, ignored reified sh:severity/sh:message.

TopBraid EDG Studio and Files Mode

- Bug Fix: TBS-4442: Better error handling for expired Studio license.
- Bug Fix: TBS-4439: Better error handling for an improperly installed Studio license.
